- Rapid claims payment systems – claims processed within days

Did You Know...?

In recent years research has found a connection between oral health and overall health. Chronic oral infections like periodontal disease can be indicators of stroke, diabetes, heart and lung diseases and even lead to low-weight pre-term births.

An eye exam does more than checking your eyesight – it can also diagnose diseases in their early stages. Early symptoms for high blood pressure, cardiovascular disease, diabetes and multiple sclerosis can all be screened for in an eye exam.
